1 YOLOv5

YOLOv5 was released by Glenn Jocher on June 9, 2020. It follows the recent releases of YOLOv4 (April 23, 2020) and EfficientDet (March 18, 2020). It was publicly released on Github here. Glenn introduced the YOLOv5 Pytorch based approach, and Yes! YOLOv5 is written in the Pytorch framework.

It is state of the art and newest version of the YOLO object detection series, and with the continuous effort and 58 open source contributors, YOLOv5 set the benchmark for object detection models very high; as shown below, it already beats the EfficientDet and its other previous YOLO versions.

There is no official paper released yet and also many controversies are happening about its name. Now Let's see some coding example that was published with its code at Github for learning purposes.

1.1 Install Dependencies

First, clone the YOLOv5 repo from GitHub to our Google colab environment using the below command

```
[0]: #!git clone https://github.com/ultralytics/yolov5.git
```

Install the dependencies using the pip command

```
[0]: %cd yolov5
```

```
/content/drive/MyDrive/self case study 2/yolov5
```

```
[0]: #!pip install -r requirements.txt
```

1.2 Train Custom YOLOv5 Detector

Here, we are able to pass a number of arguments: - **img**: define input image size - **batch**: determine batch size - **epochs**: define the number of training epochs. (Note: often, 3000+ are common here!) - **data**: set the path to our yaml file - **cfg**: specify our model configuration - **weights**: specify a custom path to weights. (Note: you can download weights from the Ultralytics Google Drive folder) - **name**: result names - **nosave**: only save the final checkpoint - **cache**: cache images for faster training

```
[0]: python train.py --img 512 --rect --batch 4 --epochs 30 --data ./data/X_ray.  
→yaml --cfg ./models/yolov5s.yaml --weights yolov5s.pt --name yolov5x_Xray  
→--cache
```

```
github: WARNING: code is out of date by 2 commits. Use 'git  
pull' to update or 'git clone https://github.com/ultralytics/yolov5' to download  
latest.

 Optimizer stripped from runs/train/yolov5x_Xray11/weights/best.pt, 14.4MB

1.3 Evaluate Performance

```
[0]: plt.figure(figsize=(20,15))
plt.axis('off')
plt.imshow(plt.imread('/content/drive/MyDrive/self case study 2/yolov5/runs/
↳train/yolov5x_Xray11/results.png'));
```

[0]:

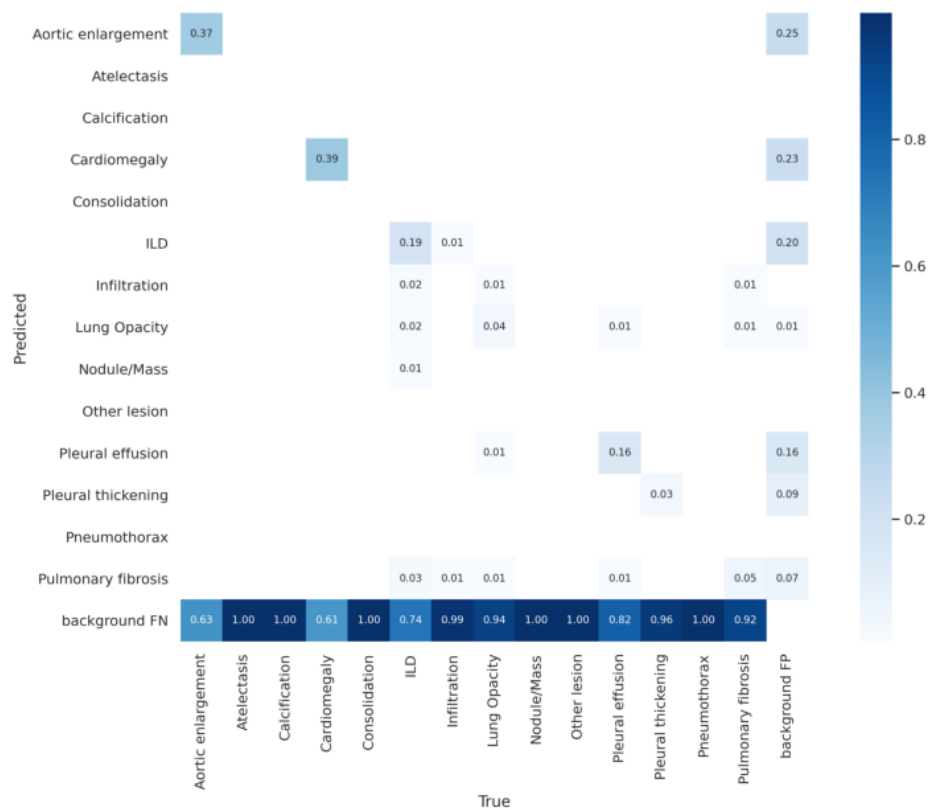

The following 3 parameters are commonly used for object detection tasks:

- GIoU is the Generalized Intersection over Union which tells how close to the ground truth our bounding box is.
- Objectness shows the probability that an object exists in an image. Here it is used as loss function.
- mAP is the mean Average Precision telling how correct are our bounding box predictions on average. It is area under curve of precision-recall curve.

It is seen that Generalized Intersection over Union (GIoU) loss and objectness loss decrease both for training. Mean Average Precision (mAP) however is at 0.21 for bounding box IoU threshold of 0.5. Recall stands at 0.25. as shown below:

```
[0]: plt.figure(figsize=(15,15))
plt.axis('off')
plt.imshow(plt.imread('/content/drive/MyDrive/self case study 2/yolov5/runs/
↳train/yolov5x_Xray11/confusion_matrix.png'));
```

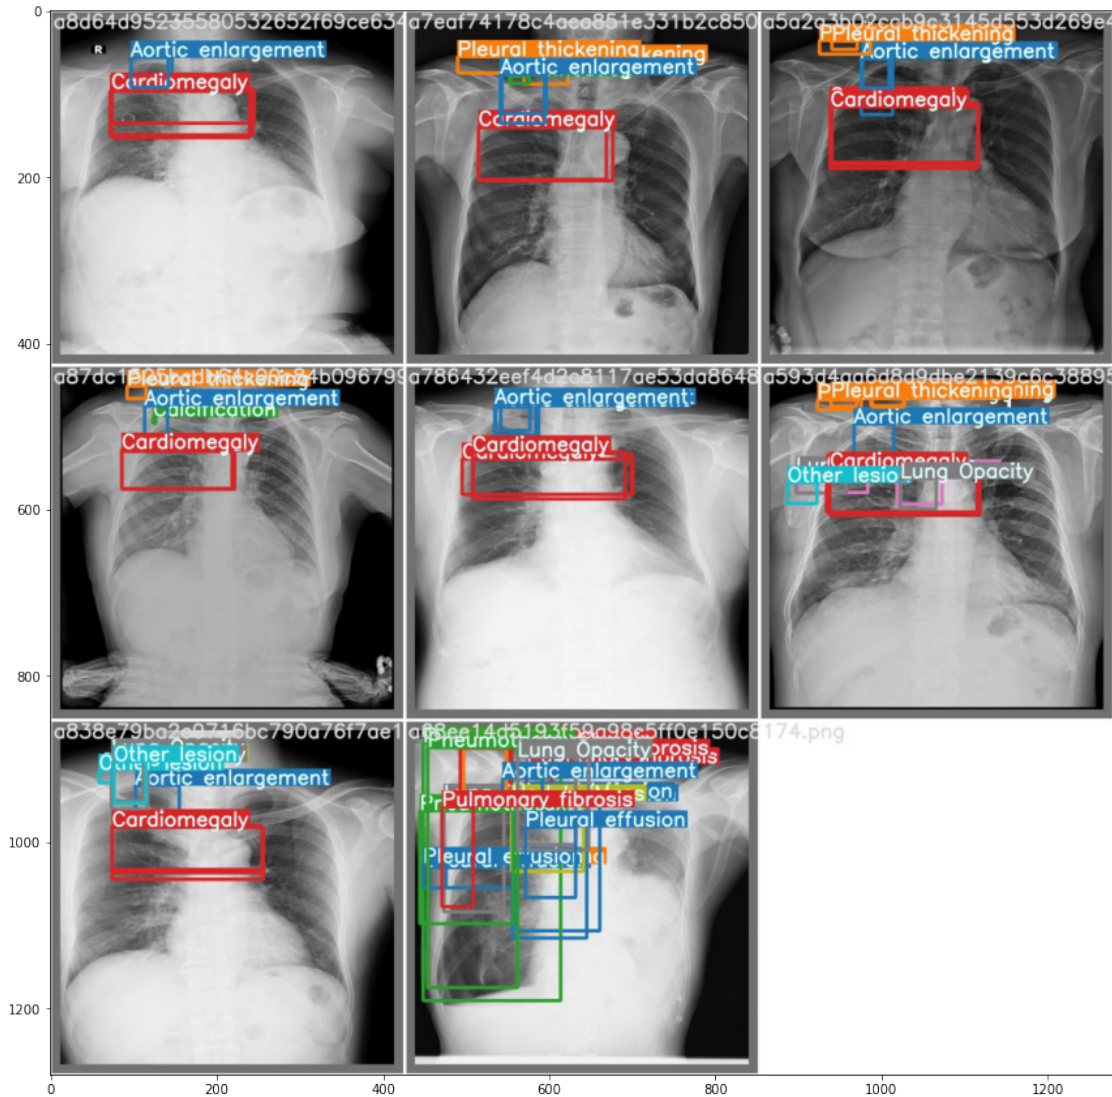

[0]:

```
[0]: import matplotlib.pyplot as plt
plt.figure(figsize = (15, 15))
